

Foundation of Statistical Energy Analysis in Vibroacoustics

A. Le Bot, Director of Research, CNRS

- Self-contained text
- Includes an introduction to waves, sound, vibration, and statistical mechanics
- Treats all aspects of the theory
- Comprehensive list of references

The discovery by R.H. Lyon in the sixties showed that sound and vibration flows from 'hot' to 'cold' bodies as in thermodynamics and aroused a revival of interest in theoretical and applied acoustics. This book is a complete and up-to-date presentation of the statistical theory of sound including the reverberation theory in room acoustics.
